

The Broadcast Flag Mandate should not be implemented if it prevents a person from using open source software to monitor unencrypted broadcasts. Copyright law provides a 'fair use' clause (section 107) which was implemented to encourage innovation --> NOT <-- to protect the financial income of large corporations.

If an entity is using broadcast media (including the Internet), and not taking steps to protect/encrypt its proprietary information, it is the ENTITY'S FAULT if it is not receiving the desire remuneration.

Kind regards,

dj
